

Ultimate

# Source Sessions Catalogue

Cars and motorbikes

November 2026

# Welcome

**The Sweet SFX libraries in our shop are the finished, ready to use cut of each recording day. Ultimate is everything behind them.**

We hold a huge archive of complete recording sessions, and this catalogue lists 111 cars and 32 motorbikes. Each Ultimate source session is the full Reaper session from the day, with every microphone and manoeuvre, including ramps and sweeps through the gears, full channels and extra variations.

Some of the vehicles here are in our shop as Short & Sweet and Standard libraries. Others are available only as Ultimate sessions.

In this catalogue

1. What Ultimate Is
2. Using and Licensing Ultimate
3. Cars
4. Motorbikes

# 1 Which Version Is Right for You?

|                       | Short & Sweet | Standard           | Ultimate |
|-----------------------|---------------|--------------------|----------|
| Number of files       | Under 100     | 200+               | 200+     |
| Onboard audio         | ✓             | ✓                  | ✓        |
| External audio        | ✓             | ✓                  | ✓        |
| Interior recordings   | Stereo        | Surround           | Surround |
| Ambisonic audio       | ×             | ✓                  | ✓        |
| Timecode              | ✓             | ✓                  | ✓        |
| Embedded metadata     | ✓             | ✓                  | Markers* |
| DAW sessions          | ×             | Pro Tools & Reaper | Reaper   |
| Reaper source session | ×             | ×                  | ✓        |
| RPM ramps / sweeps    | ×             | ×                  | ✓        |
| Technical driving     | ×             | ×                  | ✓        |

\* Ultimate is the full Reaper source session, with markers instead of embedded metadata. The table shows the car libraries: motorbike sessions have no interior recordings.

# 1 What You Get

## 1.1 Car sessions

- 12 to 16 channels onboard, including the engine bay, exhausts and surround sound cabin recordings
- Various trackside static and handheld perspectives
- Synced timecode
- Edited but unprocessed raw source material
- Around 1 hour of runtime per car
- Minimum 96kHz 24 bit

## 1.2 Motorbike sessions

- 4 to 8 channels onboard, including multiple engine and exhaust microphones
- Various trackside static and handheld perspectives
- Synced timecode
- Edited but unprocessed raw source material
- Around 30 minutes of runtime per motorbike
- Minimum 96kHz 24 bit
- The same rider throughout, for skill and consistent manoeuvres

Every session covers ramps and sweeps in multiple gears, general driving, steady idles, starts, stops, revving and other manoeuvres.

## 2 Why Choose Ultimate

### 2.1 Granular vehicle audio

Ramps and sweeps climb and fall steadily through the rev range in multiple gears. They are the material granular vehicle audio technology in video games is built from, and they are not in the shop libraries.

### 2.2 Every channel

You get every microphone from the day in one synced session, so you can balance the engine, exhaust, cabin and trackside yourself and build your own mix for each view of the vehicle.

### 2.3 Raw source

The material is edited but unprocessed, so nothing has been shaped for you. You keep full control of the sound, whether for a playable vehicle, a film, a trailer or a cutscene.

Ultimate is available on request. Tell us what you are building and we will help you choose.

## 2 Licensing and How to Ask

**Sweet SFX libraries are licensed on a per-user basis, starting at 5 seats for use in video games.**

We do not limit the license to a particular game or production. Ultimate pricing is available on request.

We like a sweet deal like anybody else, so if you are planning on buying several licenses for your company or collaborators, feel free to contact us and we'll work something out together.

To ask about a vehicle

Email us with:

- The vehicles you are interested in
- The number of seats you need
